**Patents**

1	Issued 7/13/99 5 923,139 08/605,997 98,585 Licensed from NU	Passive Constraint Devices Using Non Holonomic Transmission Elements. (Cobots #1)	Covers the mechanism that we originally called a Cobot and that we now call a "passive Cobot". the use of a computer-steered but otherwise un-powered rolling wheel, used to create virtual surfaces that can be physically perceived by a human user
2	Issued 9/14/99 5 952,788 08/859,357 98,593 Licensed from NU	Cobots #2	Adds to Cobots #1 the ability to add a limited amount of forward driving power to the Cobots otherwise passive motion. Several IAD- ice applications are shown.
3	Filed: 2/8/99 Not issued 09/246,826 98,642 Licensed from NU	Non-Contacting Sensors (Cable Angle Sensor)	Covers the use of a magnetic field emanating from an AC signal carried by a wire rope (or other support member), in order to determine the angle of the wire rope. Useful for IADs to infer which direction and how hard a worker is pushing on a payload. In applications in which the worker is more distant from the payload (e.g. conventional cranes), the cable angle sensor is useful for de-swinging the payload.
4	Filed: 5/7/99 Not issued 09/307,357 98,609 Licensed from NU	Method and Apparatus for Force Sensors	Covers a fixture design for a 2-D axis force sensor appropriate for the human hand and two kinds of readout electronics (magnetic and optical).
5	Filed: 2/9/01 Not issued 09/781,683	System and Architecture for providing a modular	Covers IADs composed of modular parts in communication with one another, and having embedded computational capability. Modules can be lifts, trolleys, user interfaces, etc. Also covers a configuration.

	98,593D	Intelligent Assist System	software interface to such IADs, in detail and with variations
6	Filed 2/12/01 Not issued 08/781,801 98,593C	Modules for use in an Integrated Intelligent Assist System	Covers trolley, hoist, proportional handle, and expansion-interface hub modules as designed by Cobotics, and many engineering variations
7	Filed 2/12/01 Not issued 08/781,886 98,593E	Hub for a Modular Intelligent Assist System	Covers the main handle and hub that constitute a central interface point in an IAD. The hub is physically near the user (as an intent sensor and as a communication station) and near the tooling (to allow IAD interfacing to the tooling). The hub also provides a communication port to the rest of the IAD and to plant information systems.
8	Filed 5/17/2001 Not issued 60/291,702 01/636	Intent Sensor for Intelligent Assist Devices	Covers the use of a guideway that moves with the overhead carriage of an IAD, adjacent to the payload but not connected to it. Can be used for rigid or cable-based systems. Provides intuitive control of payloads and is co-coupled from the mass.
9	Issued 6/5/01 6,241,452 09/357,205 99,453	Method and Apparatus for a High-Performance Hoist	Covers the determination of the mass of a payload that is suspended by a hoist, without requiring the payload to be momentarily at rest. It uses the inertial properties of the payload, not just gravity to determine the mass.
10	Filed 5/18/02 Not issued PPA 80/378,813 0201-0003	Intelligent Assist Devices for Manipulating Heavy Payloads	Covers a wide array of methods for an operator to maneuver a payload with small physical effort.
11	Filed 10/1/02 Not issued Not issued 0201-0005	"Identification and Control Means for Eliminating Instability in Intelligent Assist Devices"	IADs are used in overhead rail structures and with tooling and payloads that are out of the control of the OEM. High performance (responsiveness) and guaranteed stability are generally at odds. This patent covers control methods, algorithms, and software that detect and neutralizes instability so the OEM need not limit performance conservatively.
